

breezemount

SPECIALIST PERIMETER SECURITY SOLUTIONS

Safety Edges

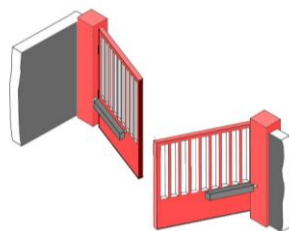

Breezemount has been appointed as the new Irish distributor for ASO safety solutions with the exclusive rights to supply safety edges throughout Ireland. Offering a range of safety edge profiles, suitable for small, medium and large sliding, swing gates, barriers & roller shutter installations, the safety edges are necessary to safe guard closing edges at possible crushing or shearing points. Please find attached our price list and details of the safety edges in the attached document.

As you are already aware, in June 2010, the tragic deaths of two young children in separate incidents less than one week apart served to highlight the safety issues facing the UK gate automation industry. This was particularly the case since these tragedies followed so soon after the conviction of a gate manufacturer for breaches of health and safety law in relation to an earlier child fatality.

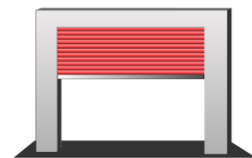

The legal position is that powered gate systems are considered to be "machinery". This means that, by law, every new powered gate, when it is put into service, must comply with the European Machinery Directive (2006/42/EC). The Health and Safety Executive (HSE) has lead responsibility for enforcement of this legislation, which has been transposed into UK law as the Supply of Machinery (Safety) Regulations 2008. The responsibility for complying with the law rests with manufacturers and installers.

Traffic Barriers

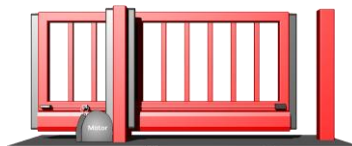

Double Leaf Gates
